Published by Authority of The Hon. James A. MacKinnon, M.P., Minister of Trade and Commence. DOMINION STATISTICIAN: HERBERT MARSHALL, CHIEF, BUSINESS STATISTICS BRANCH: SYDNEY B. SMITH

ECONOMIC CONDITIONS IN APRIL

Economic activity in the first quarter of 1947 continued at a high level. Production in many industries reached post-war peaks; employment although lower than last fall, reflecting the seasonal decline in agriculture, was greater than a year ago. The budget brought down at the end of April was in decided contrast to the budgets of the war years with their substantial Despite the substantial redeficits. duction in income tax rates last year, the level of personal income tax payments was higher than in the preceding year, reflecting the advance of employment and of income payments during 1946-47.

Budget

In the annual budget the Dominion Government announced a surplus of about \$352 million for the fiscal year ended March 31. This surplus, accumulated during a period when expenditures by business men, consumers and foreign buyers were exerting a strong upward pressure on price levels, was one factor that helped to dampen the trend toward higher prices. budget for the fiscal year 1947-48 calls for a reduction in personal income tax amounting to an average of 29 per cent to take place at the beginning of July, and a discontinuance of the excess profits tax effective at the end of the calendar year. These tax reductions together with the previously announced removal of the gasoline tax and a decline in special receipts are expected to reduce total revenues to \$2,290 million for the current fiscal year. Total expenditures are expected to decline to \$2,100 million leaving a surplus of \$190 million for the year. Realization of this surplus should continue to help stem the upward price movement of recent months. If additional tax agreements are signed this surplus may be much smaller but it is unlikely that total tax collections, provincial and Dominion, would be affected.

As a result of estimates presented in the budget, spendable incomes would be increased by about \$15 million a month or by about 2 per cent when the reduction in personal income tax goes into effect at the first of July. A further addition will be made later in the year when the \$58 million in refundable taxes are repaid. For the consumer this reduction in taxes will be offset in part by any price increases which take place such as those which have followed the removal of subsidies on cotton, coal, butter and other commodities.

Total government expenditure for the fiscal year 1946-47 was reduced by almost half from the preceding year. In the same period, expenditures such as interest on the public debt, family allowance payments and payments to veterans, a type of expenditure that involves mainly a transfer of funds from one group in society to another, have increased by over \$280 million. In contrast government expenditures on goods and services, expenditures which utilize labour, materials and capital, have declined by more than 50 per cent. expenditures in the present fiscal year are expected to decline a further 20 per cent.

Production

The high level of output in the steel industry in March this year, when nearly 260,000 tons of ingot steel were produced, the highest volume since April 1945, was in line with the advanced position of industrial activity in general. The output of most basic materials has increased since the end of the year, and the production of durable consumer goods is also larger.

Nickel output rose sharply in the first two months of 1947, reversing the decline which brought total production in 1946 more than 20 p.c. lower than in 1945 and points to the probable realization of producers' estimates for 1947 output at 1945 levels. Copper production in February also exceeded the January output, but the increase was not sufficient to raise the two-month total over the output in the first two months last year. Output for this year is forecast at nearly 21 p.c. greater than last year.

The price increases granted in January for non-ferrous metals may lead to continuing high production.

Steel ingot production in 1947 was also forecast by the leading producers in the industry. At 3·1 million tons the output would be even greater than the 1942 wartime peak of 3 millions. March production reached this rate and although first quarter operations were at an annual rate of not quite 2·9 millions this level was well above that of the two previous years.

Output of refrigerators, washing machines and automobiles all showed increases in monthly output in January and February of this year. Automobile output in February for the first time exceeded the 1937 monthly average. Electric washing machines reached a level of output equal to the 1937 monthly average, the maximum level of production attained following the depression. Refrigerator and radio production reached and passed this level of output some months ago, January production of electric refrigerators establishing a new high position.

Retail sales in March by value increased over the preceding month and were greater than in the same month of the preceding year in spite of the unusually cold weather which appears to be the main factor in the March decline in the rate of increase, offsetting the customary seasonal and Easter impetus to increased spring purchases.

Radios and electrical appliances again increased more than the average, as did sales by furniture and hardware stores. The increase in the production of durable and semi-durable consumer goods in the last year is shown in the

steady increase in retail sales of these goods. Part of the advance is accounted for by price increases, but the steadily higher percentage increase in these groups over the previous year is in large part the result of the reappearance of larger and more diversified stocks of better quality merchandise.

Construction

Contracts awarded in the building industry declined in March from the previous two months, a contraseasonal trend which may not be entirely accounted for by the bad weather which prevailed throughout the country for the entire month. Contracts awarded for residential construction, and the number of dwelling units commenced in the first quarter of 1947, are both lower by more than 35 p.c. from a year ago.

Employment in the building trades has moved upward since the beginning of the year and after the seasonal decline appears to be continuing along the upward trend which began at the end of the war. The index of prices of building materials has moved up over the same period and is now more than 20 p.c. higher than in 1945. In the last four months the index has risen slightly more than 9 p.c. reflecting increases in lumber prices, paints and chemicals and various non-ferrous metal products.

The production and shipment of most building materials continued to show an upward trend in the first part of 1947 following the fairly substantial increases in 1946 and 1945. Cement, products, gypsum, insulating board and asphalt products are all greater and the major producers in these industries forecast higher production this year than in 1946. Production of plumbing, heating and electrical equipment which for some items in 1946, (for example, steel pipes and tubes and cast iron radiators) showed a decline from the previous year's output, is also generally estimated at a higher level for 1947.

Prices

The upward trend in prices which set in with the beginning of the year, continued in March as both the whole-

ir

sale and retail price indexes advanced over the preceding month. The increases in the wholesale index were fairly general, with the greatest advances concentrated in the textile products and vegetable products groups, reflecting the price increases in grains and the reduction in the cotton subsidy. In the cost of living index, rents and fuel were unchanged from March but all other groups The sharpest advances. increased. were, as in the previous month, in food, clothing, and home furniture and furnishings. Clothing and home furnishings both showed increases of more than 3½ points, the largest monthly advances since price ceilings were imposed in October, 1941.

Further subsidy reductions were put into effect last month and prices either adjusted by order or controls removed. The subsidy on coal imported from the United States was removed on April 15 and coal released from price control. The butter subsidy was removed at the end of April and butter, processed milk and cheese prices increased. The reduction in lumber export quotas and the consequent loss of the higher priced market resulted also in an upward revision of domestic lumber prices.

Labour

The civilian labour force at the beginning of March was estimated at 4,706,000 persons, of which 3,728,000 were men and 978,000 were women. This is a decline from the number in the previous estimate of November by approximately 140,000 persons, divided nearly evenly between men and women. Employment fell over the same period and unemployment rose by about 25,000.

Because of the special factors involved in the economy during the winter of 1945, the conversion from war to civilian production, and the assimilation of large numbers of the discharged forces into the labour force, a comparison of the changes between November and March in the two years shows wide differences. In the winter of 1945-46 the labour force increased and employment declined only slightly. Unemployment at the same time increased proportionally more than this year.

Employment in construction and agriculture declined substantially during the winter and employment in trade, finance and insurance dropped slightly. During April the demand for labour increased and the number of unplaced applicants for work at the unemployment offices declined steadily.

Trade

In the first quarter of 1947, commodity exports and imports were closer to a balance than at any time in the last seven or eight years. Domestic exports in the quarter amounted in value to \$597.1 million compared with imports of \$559.8 million, a credit trade balance of \$37.3 million. During the last quarter of 1946, the balance amounted to \$81.8 million and in the first quarter of 1946 to \$123.4 million.

The declining credit balance is due almost entirely to the rise in the level of imports during the last twelve months. First quarter imports represented an increase of \$162.6 million. or 40 per cent over the first quarter of 1946. Most of this increase was concentrated in imports of United States goods, which were valued at \$440.9 million in the first quarter of 1947, \$157.3 million greater than in the comparable period of 1946. It should be noted, however, that the increase in imports from the U.S. over the last quarter of 1946 amounted to only \$5.3 million. This may indicate a tendency towards a levelling off in the volume of Canadian purchases abroad, although a seasonal fall is normal at this time of year.

Exports in the first quarter of 1947. while \$76.5 million greater than a year ago, declined \$81.8 million or 12 per cent, from the preceding quarter. Part of this drop may be attributed to the seasonal shipping and grain movements; the importance of this factor being difficult to assess. In the years 1935-39 the average seasonal decline at this time amounted to 33 per cent for exports and 23 per cent

for imports.

STATISTICIEN DU DOMINION: HERBERT MARSHALL CHEF, BRANCHE DES STATISTIQUES ÉCONOMIQUES: SYDNEY B. SMITH

SITUATION ÉCONOMIQUE EN AVRIL

L'activité économique reste intense au cours du premier trimestre de 1947. La production dans maintes industries touche des sommets d'avant-guerre; l'emploi, bien que moins élevé que l'automne dernier, reflétant ainsi le déclin saisonnier dans l'agriculture, est plus élevé qu'il y a un an. Le budget déposé à la fin d'avril vient en contraste net avec les budgets de guerre et leurs déficits considérables. Malgré une réduction sensible de l'impôt sur le revenu l'an dernier, le niveau des paiements d'impôts sur le revenu des particuliers est plus élevé que l'année précédente, ce qui reflète l'augmentation de l'emploi et des paiements de revenus en 1946-1947.

Budget

Le gouvernement fédéral, dans son budget annuel, annonce un excédent d'environ 352 millions de dollars pour l'année financière se terminant le 31 mars. Cet excédent, accumulé durant une période où les dépenses des hommes d'affaires, des consommateurs et des acheteurs étrangers exercent une forte pression inflationniste sur le niveau des prix, est un facteur qui aide entre autres à freiner la hausse. Le budget de l'année financière de 1947-1948 comporte un dégrèvement d'impôt sur le revenu des particuliers de 29 p.100 en moyenne, devant être mis en vigueur au début de juillet, et l'abolition de la taxe sur les surplus de bénéfices, à compter de la fin de l'année civile. Il est prévu que ces réductions, ajoutées à la suppression antérieurement annoncée de la taxe sur l'essence et du déclin des recettes spéciales, diminueront les recettes globales à 2,290 millions de dollars durant l'année financière courante. Les dé-penses totales déclineront à 2,100 millions de dollars, laissant un excédent de 190 millions de dollars pour l'année. Cet excédent devrait continuer d'aider à ralentir la tendance à la hausse des prix ces récents mois. Si de nouveaux accords fiscaux sont signés, cet excédent sera peut-être beaucoup moins elevé, mais il est peu probable que le total des recouvrements provinciaux et fédéraux en souffrent.

D'après les prévisions budgétaires, les revenus dépensables augmenteraient d'environ 15 millions de dollars par mois, ou de près de 2 p.100, au moment où le dégrèvement de l'impôt sur le revenu des particuliers entrera en vigueur le 1er juillet. Une nouvelle augmentation se produira plus tard durant l'année lorsque les 58 millions de dollars d'impôt remboursable seront remboursés. Pour le consommateur, ce dégrèvement sera contre-balancé en partie par toute hausse subséquente des prix, telles que les hausses qui se sont produites à la suite de l'abolition des subventions du coton, du charbon, du beurre et d'autres denrées.

Les dépenses totales de l'Administration durant l'année financière de 1946-1947 diminuent de près de la moitié par rapport à l'année précédente. cours de la même période, les dépenses telles que l'intérêt sur la dette publique, les allocations familiales et les versements aux anciens combattants, et qui consistent surtout à transférer des fonds d'un groupe de la société à un autre, augmentent de plus de 280 millions de dollars. Par contre, les dépenses de l'État en marchandises et en services, dépenses qui utilisent de la main-d'œuvre, des matériaux et du capital, déclinent de plus de 50 p.100. Il est prévu que les dépenses globales durant l'année financière courante diminueront d'un autre 20 p.100.

Production

Le niveau élevé de la production dans l'industrie de l'acier en mars cette année, soit près de 260,000 tonnes de lingots, volume le plus considérable depuis avril 1945, s'accorde avec la situation très favorable de l'activité industrielle en général. Le rendement de la plupart des matières de base et la production de biens durables de consommation augmentent depuis la fin de l'année.

La production de nickel augmente brusquement durant les deux premiers mois de 1947, renversant le déclin qui, en 1946, avait établi la production à plus de 20 p. 100 au-dessous de celle de 1945, et indique la réalisation probable des prévisions des producteurs voulant que le rendement de 1947 soit égal à celui de 1945. La production de cuivre en février dépasse aussi celle de janvier, mais ce gain ne suffit pas à augmenter le total des deux mois au-dessus du rendement des deux premiers mois de l'an dernier. Il est prévu que la production cette année atteindra 21 p. 100 de plus que l'an dernier.

Les augmentations de prix accordées en janvier pour les métaux non ferreux détermineront peut-être une production élevée persistante.

D'après les principaux producteurs, la production de lingots d'acier en 1947 sera de 3,100,000 tonnes; à ce niveau, elle serait même plus elevée que la production maximum de temps de guerre, 3 millions de tonnes, atteinte en 1942. La production en mars touche ce taux et, bien que les opérations du premier trimestre s'établissent à un rythme annuel d'un peu moins de 2,900,000, ce niveau est fort supérieur à celui des deux années précédentes.

La production mensuelle de réfrigérateurs, de lessiveuses et d'autos augmente en janvier et février cette année. La production d'autos en février dépasse pour la première fois la moyenne mensuelle de 1937. Les lessiveuses électriques touchent un niveau égal à la moyenne mensuelle de 1937, niveau maximum de production touché après la dépression. Les réfrigérateurs et radios atteignent et dépassent ce niveau depuis quelques mois; la production de réfrigérateurs électriques en janvier atteint un nouveau maximum.

Les ventes de détail en mars augmentent en valeur comparativement au mois précédent et sont plus volumineuses que celles du même mois l'année précédente, en dépit de la température particulièrement froide qui semble être le facteur principal du ralentissement du rythme d'augmentation en mars et fait contrepoids à la tendance habituelle des achats à augmenter au printemps et au temps de Pâques.

Les radios et accessoires électriques augmentent de nouveau au-dessus de la moyenne; les ventes de magasins de meubles et de quincaillerie font de même. L'augmentation de la production de marchandises durables et semi-durables de consommation l'année dernière se reflète dans l'augmentation régulière des ventes de détail de ces marchandises. Une partie de l'augmentation découle de la hausse des prix, mais le pourcentage d'augmentation de plus en plus elevé dans ces groupes par rapport à l'année précédente résulte en grande partie du retour sur le marché de stocks plus considérables et plus variés de marchandises de meilleure qualité.

Construction

Les contrats adjugés dans l'industrie de la construction déclinent en mars auprès des deux mois précédents; cette tendance hors de saison ne s'explique pas entièrement par la très mauvaise température durant tout le mois à travers le pays. Les contrats adjugés pour la construction de maisons et le nombre d'unités de logement commencées pendant le premier trimestre de 1947 sont tous deux inférieurs de 35 p. 100 à ceux de l'an dernier.

L'emploi dans les métiers de construction gagne du terrain depuis le début de l'année et, après un déclin saisonnier, semble persister dans sa tendance à la hausse commencée à la fin de la guerre. L'indice des prix des matériaux de construction augmente durant la même période; il est maintenant de plus de 20 p. 100 plus élevé que celui de 1945. Au cours des quatre derniers mois, l'indice gagne un peu plus de 9 p. 100, reflétant l'augmentation du prix du bois d'œuvre, des peintures, des produits chimiques et des divers articles en métaux non ferreux.

La production et les expéditions de la plupart des matériaux de construction conservent leur tendance ascendante durant la première partie de 1947, à la suite des augmentations relativement considérables en 1946 et 1945. Le ciment, les dérivés de l'argile, le gypse, les planches isolantes et les produits en asphalte augmentent tous et les producteurs principaux de ces industries prévoient une plus forte production cette année qu'en 1946. La production d'outillage électrique, de plomberie et de chauffage qui, dans certains cas (les tuvaux et tubes d'acier et les radiateurs en fonte, par exemple), a enregistré en 1946 un déclin auprès de la production de l'année précédente, est de façon générale estimée à un niveau plus élevé en 1947.

Prix

La tendance ascendante des prix, qui se fait sentir depuis le début de l'année, persiste en mars alors que les indices des prix de gros et de détail augmentent comparativement au mois précédent. L'augmentation de l'indice des prix de gros est assez général; les hausses les plus considérables se concentrent dans les groupes des produits textiles et des légumes, ce qui reflète les hausses de prix des céréales et la réduction de la subvention du coton. Dans l'indice du coût de la vie, le loyer et le combustible ne changent pas, mais tous les autres groupes augmentent. Comme au mois précédent, les aliments, les vêtements. les meubles et les garnitures de maison enregistrent les augmentations les plus fortes. Les vêtements et les garnitures de maison augmentent tous deux de plus de 3½ points, l'augmentation mensuelle la plus forte depuis que les prix-plafond ont été imposés en octobre

De nouveau, les subventions sont réduites le mois dernier et les prix sont ou ajustés par ordonnance ou soustraits à la réglementation. Les subventions accordées au charbon importé des Etats-Unis sont retirées le 15 avril et le prix du charbon est libéré de la réglementation. Les subventions du beurre sont discontinuées à la fin d'avril et le prix du beurre, du lait et du

fromage conditionnés augmente. La réduction des contingentements de bois d'exportation et la perte conséquente des débouchés offrant des prix plus élevés entraînent aussi une hausse du prix du bois au Canada.

Commerce

Au cours du premier trimestre de 1947, les exportations et importations de denrées se rapprochent de l'équilibre plus que durant les sept ou huit dernières années. Les exportations domestiques du trimestre ont une valeur de \$597,100,000, en comparaison de \$559,800,000 en importations, soit une balance commerciale créditrice de \$37,700,000. Durant le dernier trimestre de 1946, la balance est de \$81,500,000 et, durant les premiers trois mois de 1946, de \$123,400,000.

La baisse de la balance créditrice est due presque entièrement à l'augmentation du niveau des importations au cours des douze derniers mois. Les importations du premier trimestre enregistrent une augmentation de \$162,-600,000 ou de 40 p.c. sur la même période l'an dernier. La grande partie de cette augmentation découle des importations de marchandises des Etats-Unis, qui sont évaluées à \$440,-900.000 durant les trois premiers mois de 1947, soit \$157,300,000 de plus qu'en 1946. Il faut remarquer cependant que l'augmentation des importations des Etats-Unis n'est que de \$5,300,000 comparativement au premier trimestre de 1946. Cela peut indiquer une tendance vers la stabilisation du volume des achats canadiens à l'étranger, bien qu'un déclin saisonnier soit normal à cette époque.

Les exportations durant le premier trimestre de 1947 dépassent de \$76,500,000 celles de 1946, mais elles tombent de \$81,800,000 ou de 12 p.c. comparativement au trimestre précédent. Une partie de ce déclin résulte du mouvement saisonnier du transport et du grain; l'importance de ce facteur est difficile à déterminer. Durant les années de 1935-1939, la moyenne du déclin saisonnier à cette époque s'établit à 33 p.c. des exportations et 23 p.c. des importations.

Bureau fédéral de la statistique, le 31 mai 1947.

REVISION OF THE MONTHLY INDEX OF INDUSTRIAL PRODUCTION

The index number, first popularized by the "London Economist" during 1869 in connection with a study of wholesale prices, is now filling an important place as a device for measuring the trend of economic conditions. It is safer to base one's impression of the current trend upon a comprehensive index embracing a wide range of economic factors than upon any limited group of components that necessarily fluctuate according to particular influences. An index number reflecting the general trend of production has a considerable advantage over the individual factor as a background for the determination of policy by the investor or business executive.

In the present number of the "Monthly Review" are presented the more important components of the revised index of Industrial Production for the years 1935 to the present. It is intended to carry the revision back to 1919 and when completed the results will appear in subsequent issues. It was decided at the outset to omit Construction from the new index in view of the inadequacy of current data. Thus, the three main components are Mining, Manufactures and Electric Power. The new standard classification of industries prepared by the Inter-departmental Working Committee was adopted, thus broadening the classification and effecting a more detailed breakdown of the various components. The number of industries and products represented in the index has been greatly increased as a larger body of information on a current basis is available than at the time of previous revisions.

Since January 1945, the index has been compiled from upwards of 170 individual product or industry series which directly represent a large part of the mining and manufacturing output. A large proportion of the monthly data is reported in physical volume For the remainder it is possible to obtain a rough measure of production by using available figures of deliveries, materials consumed, man-hours or employment data. The available statistical series of production vary considerably in completeness and accuracy and some of them have not always been reported continuously on a comparable basis. Adjusting and estimating were frequently necessary to improve the accuracy of the figures and, for a number of the series, to establish a greater measure of comparability.

For the industries which could not be measured by physical quantities or were not covered by monthly production data, Census of Industry results were used to establish annual levels of physical output. Monthly fluctuations were then measured through the use of the actual number of wage-earners reported for each month.

It was possible to follow this method from 1935 to 1944 inclusive, the last year for which complete Census of Industry results are available. From that time forward man-hours were used to measure month-to-month fluctuations in physical output. The relationship of manhours to production may be established only after Census of Industry data become available. Thus the measure of productivity obtained in 1944 will be used until the Census results of 1945 are made available, at which time the new relationship will be utilized. In this way adjustments are made for estimated long-term changes in productivity. Although the derived estimates of output are difficult to calculate and are probably more subject to error than are most physical volume series, the procedure makes possible the inclusion of a number of important industries which would otherwise not be represented in the index. The general results are consequently more representative of actual conditions.

The formula adopted for the revised index is, in form, the weighted arithmetic average of relatives which in reality accords with the aggregative method. The same formula was also used in the old index. Net values in the base-period 1935–39 were utilized to establish the weights.

It is felt that the inclusion of new series and the adoption of productivity adjustments will bring the index more in line with current fluctuations and will strengthen greatly its accuracy and reliability. It is not likely that extensive improvements in basic data of production and employment which have contributed greatly to the current revision will be so important again in the near future. The principal developments that may affect the accuracy of the index and call for further revision will be such changes as occur in the amount of physical output per man-hour and adjustments occasioned by the availability of further bench-mark data.
